### **DETAILED ACTION**

In view of applicants' remarks in the Brief filed 4/25/05, and the newly found art used below, the finality of the rejection mailed 1/7/05 is hereby withdrawn.

#### ***Allowable Subject Matter***

Claims 46-59 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Claim Rejections - 35 USC § 103***

Claim 45 is rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (APA) in view of Burda. APA is the apparatus disclosed in the first few pages of the specification. This includes a brush chipper with manual controls. The use of manual controls, as acknowledged in the specification, is time consuming and inefficient. Burda solves this problem by disclosing similar apparatus (a comminuting device) having automatic controls based on measurements taken at separate intervals; for example, see the abstract, lines 9-12. Therefore, in order to more efficiently run the chipper, it would have been obvious for one of ordinary skill in the art to modify APA by providing a control system based on measurements at separate time intervals, taught to be desirable by Burda. Note in Burda that the shredding mechanism is reversed to overcome a jam and this is held to be equivalent to applicants' 'modifying performance of one of the engine, cutters...'.

#### ***Response to Arguments***

Art Unit: 3725
